### **DETAILED ACTION**

Claims 1-20 are pending in the present application.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-20 are rejected under 35 U.S.C. 102(a) as being anticipated by Jiang et al.

(Generation of a bioactive neuropeptide in a cell-free system Anal. Biochem 316 (2003) 34-40).

The invention of the instant claims is drawn to a vector construct comprising a multiple response element (MRE), a cAMP response element (CRE), and a serum response element (SRE). The invention also is drawn to host cells comprising the construct and methods of assaying for G-protein coupled receptors (GPCRs) using the vector of the claims.

Jiang et al. disclose the invention of the instant claims. Jiang et al. disclose a functional assay for G-protein coupled receptors comprising an MRE, CRE, SRE from the human c-fos gene, and luciferase reporter. The disclosure also disclosed that HEK-293 cells are transfected with the construct. See page 35-36.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it

Art Unit: 1636

pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The written description requirement is established by 35 U.S.C. 112, first paragraph which states that the: “*specification* shall contain a written description of the invention. . .[emphasis added].” A specification must convey to one of skill in the art that “as of the filing date sought, [the inventor] was in possession of the invention.” See *Vas Cath v. Mahurkar* 935 F.2d 1555, 1560 19 USPQ2d 1111, 1117 (Fed. Cir. 1991). Applicant may show that he is in “possession” of the invention claimed by describing the invention with all of its claimed limitations “by such descriptive means as words, structures, figures, diagrams, formulas, etc., that fully set forth the claimed invention.” See *Lockwood v. American Airlines Inc.* 107 F.3d 1565, 1572, 41 USPQ2d 1961, 1966 (Fed. Cir. 1997).

The invention of the instant claims is drawn to a vector comprising an MRE, CRE and SRE. The instant claims are drawn to a vector with structural components, MRE, CRE and SRE, that are undefined in the specification or the claims. The breadth of the claims is such that these are genus claims which would embrace any sequence that is labeled an MRE, CRE and SRE in the vector claims. The specification does not disclose any teachings as to the structures of these sequences and how the structures of these sequences relate to their function. Thus, the specification neither describes the complete structure of a representative number of species nor

Art Unit: 1636

does the specification describe a representative number of species in terms of partial structure and relevant identifying characteristics. Absent teachings and guidance as to the structure-function relationship of the claimed vector, the specification does not describe the claimed genus in such full, clear, concise and exact terms so as to indicate that Applicant had possession of these molecules at the time of filing of the present application.
